

ANDREA TAVERNITI

SOFTWARE ENGINEER | FULL-STACK, CLOUD & IOT

+39 329 975 9624 | tavernitiandrea@gmail.com | Calabria, Italia | linkedin.com/in/andrea-taverniti-8403a51bb

GitHub: github.com/andreataverniti-dev | **Portfolio:** andreataverniti-dev.github.io

Software Engineer experienced in designing and delivering full-stack, cloud and IoT products. Within an R&D environment, I contribute to EU-funded projects through technical analysis, architecture decisions, development, hardware/software integration and technical documentation. I also independently designed and built SNALS Digital Desk, a live Flutter/Firebase platform used by real users.

PROFESSIONAL EXPERIENCE

Software Developer — Software Engineering & R&D | TEA S.r.l. July 2025 – Present

Catanzaro / remote from Monasterace, Italy

- Analyse requirements, design solutions and select technologies for R&D applications and EU-funded projects.
- Deliver full-stack development, evolutionary maintenance and problem solving across existing architectures, while supporting deadlines, technical reviews and project deliverables.
- Coordinate technical activities with universities, company partners and hardware suppliers; prepare reports, presentations and project documentation.
- Integrate software with ESP32 boards, proximity sensors, relays and actuators for multisensory systems and IoT demonstrators.
- Support multispectral acquisition activities on historical parchments in museum environments as part of applied cultural-heritage research.

Freelance Software Developer | Independent and client projects 2019 – Present

Remote

- Independently designed and developed SNALS Digital Desk, a cross-platform Flutter/Firebase platform currently live and used by real users.
- Built more than 80 custom FiveM scripts, including virtual economies, inventories, missions, administration dashboards and React interfaces.
- Managed and optimised MySQL databases containing more than 300,000 records, using asynchronous synchronisation through oxmysql.
- Collaborated with more than 100 communities and private servers, providing integration, documentation and post-release support.
- Delivered websites and web applications for clients using React and WordPress, including booking, e-commerce, analytics and REST integrations.

SELECTED PROJECTS

SNALS Digital Desk — Flutter, Firebase, Node.js, Google APIs

- End-to-end product including role-based access, multi-location booking, case workflows, real-time chat, QR membership cards, notifications and PDF/CSV reporting.
- Sole ownership of cloud architecture, data model, security rules, PWA and deployment; proposed by a regional representative to the national organisation. Private repository.

Live application: <https://snals-monasterace.web.app/>

AIVES — React, Python, IoT, automation

- Management tool that standardises project-file generation and enables non-technical operators to configure multisensory experiences.
- Analysed and redesigned sensor logic to prevent unintended reactivation and improve journey reliability.

R&D PROJECTS

MITICA — ESP32, relays, sensors and actuators

- Designed and integrated the AIVES technology demonstrator, covering programming, assembly, configuration, debugging and testing.
- Rapidly acquired electronics skills and fabricated physical components through soldering to complete hardware/software integration.

GAIA — Application and European research

- Defined the initial application structure and contributed to games and configurations supporting children on the autism spectrum.
- Prepared the technical report, presentation, deliverables and documentation; coordinated operational work with university, company and hardware partners.

FiveM Engineering — Lua, React, MySQL, oxmysql

- Complex multiplayer server systems, responsive interfaces and live architecture maintenance focused on stability and resource efficiency.
- Optimised queries, caching and asynchronous synchronisation across large databases.

Professional Portfolio — HTML, CSS, JavaScript, GitHub Pages

- Public portfolio with accessible source code and deployment through GitHub Pages.
Public repository: <https://github.com/andreataverniti-dev/andreataverniti-dev.github.io>

TECHNICAL SKILLS

Expert	Lua, MySQL
Intermediate	JavaScript, React, Flutter, Dart, Firebase, Firestore, Git/GitHub
Working knowledge	TypeScript, Node.js, Python, REST APIs, HTML5, CSS3, Tailwind CSS, Bootstrap, SQL, Firebase services, PostgreSQL, MariaDB, SQLite, MongoDB, Docker, WordPress, oxmysql
Academic fundamentals	Java, C#, C++
IoT & Hardware	Proximity sensors, relays, actuators, soldering and hardware/software integration — project experience

EDUCATION

BSc in Computer Engineering University of Calabria	2016/2017 – October 2026 (expected)
Rende, Italy	
Scientific High School Diploma — 84/100 Pietro Mazzone Scientific High School	2011 – 2016
Roccella Jonica, Italy	

LANGUAGES & ADDITIONAL INFORMATION

Italian: native | English: B1 | Driving licence: B
