PROFILE

Software Engineer focused on designing and delivering full-stack, cloud and IoT products. In an R&D environment, I contribute to EU-funded projects through technical analysis, architecture decisions, development, hardware/software integration and documentation. I also independently designed SNALS Digital Desk, a live Flutter/Firebase platform used by real users.

PROFESSIONAL EXPERIENCE

Software Analyst & Developer

TEA S.R.L. | Catanzaro, Italy - hybrid/remote | Jul 2025 - Present

- Analyse requirements, design solutions and select technologies for R&D applications and EU-funded projects.
- Deliver full-stack development, evolutionary maintenance and problem solving across existing architectures, supporting deadlines, technical reviews and project deliverables.
- Coordinate technical work with universities, company partners and hardware suppliers; prepare reports, presentations and project documentation.
- Integrate software with ESP32 boards, proximity sensors, relays and actuators for multisensory systems and IoT demonstrators.
- Support multispectral acquisition activities on historical parchments in museum environments for applied cultural-heritage research.

SELECTED PROJECTS

SNALS Digital Desk *Flutter, Firebase, Node.js, Google APIs*

End-to-end product with role-based access, multi-location booking, document workflows, real-time chat, QR cards, notifications, reporting and Google Calendar/Meet integrations. Sole ownership of cloud architecture, data model, security, PWA and deployment; proposed by a regional representative to the national organisation.

AIVES *React, Python, IoT, ESP32*

Management tool that standardises project-file generation and enables non-technical operators to configure multisensory experiences. Sensor logic analysis and correction improved journey reliability and continuity.

MITICA *ESP32, relays, sensors, actuators*

Designed and integrated the AIVES technology demonstrator, covering programming, assembly, configuration, debugging, testing and fabrication of physical components through soldering.

GAIA *Software design, R&D, deliverables*

Defined the application foundation and contributed to accessible games for children on the autism spectrum. Prepared technical reports, presentations and deliverables while coordinating with university and hardware partners.

FiveM Engineering *Lua, React, MySQL, oxmysql*

Complex multiplayer systems, responsive interfaces and live architectures with optimised queries, caching and asynchronous synchronisation across large databases.

PROFESSIONAL EXPERIENCE

Freelance Software Developer

Independent and client projects | Remote | 2019 - Present

- Independently designed and developed SNALS Digital Desk, a cross-platform Flutter/Firebase platform currently live and used by real users.
- Built more than 80 custom FiveM systems, including virtual economies, inventories, missions, administration dashboards and React interfaces.
- Managed and optimised MySQL databases containing more than 300,000 records with asynchronous synchronisation through oxmysql.
- Worked with more than 100 communities and private servers, providing integration, documentation and post-release support.

TECHNICAL SKILLS

Frontend	React, TypeScript, JavaScript, Flutter, Dart, HTML5, CSS3, Tailwind CSS, Bootstrap
Backend & Cloud	Node.js, Python, PHP, Firebase, Cloud Functions, REST APIs, Authentication, Storage, Messaging
Data & IoT	MySQL, PostgreSQL, MariaDB, SQLite, MongoDB, Firestore, ESP32, Arduino, sensors, relays, actuators
Tools	Git, GitHub, Docker, VS Code, WordPress, oxmysql

EDUCATION & LANGUAGES

BSc in Computer Engineering | University of Calabria | Expected: October 2026
Scientific High School Diploma - 84/100 | Pietro Mazzini High School | 2011 - 2016
Italian: native | English: B1 | Driving licence: B
